

PRODUCT DATA SHEET

Monosialoganglioside GM₄ (NH₄⁺ salt)

Catalog No: 1535

Common Name: GM₄

Source: natural, egg, chicken

Solubility: chloroform/methanol (2:1)

Forms micellar solution in water

CAS No: 54827-14-4

Molecular Formula: C₅₇H₁₀₆N₂O₁₇ • NH₃

Molecular Weight: 1091+NH₃

(2-hydroxydocosanoyl)

Storage: -20°C

Purity: TLC > 98%

TLC System: chloroform/ methanol/ 0.02%
calcium chloride (60:30:5 by Volume.)

Appearance: solid

Application Notes:

Gangliosides¹ are acidic glycosphingolipids that form lipid rafts in the outer leaflet of the cell plasma membrane, especially in neuronal cells in the central nervous system.² They participate in cellular proliferation, differentiation, adhesion, signal transduction, cell-to-cell interactions, tumorigenesis, and metastasis.³ The accumulation of gangliosides has been linked to several diseases including Tay-Sachs and Sandhoff disease. An autoimmune response against gangliosides can lead to Guillain-Barre syndrome. GM₄ is a monosialoganglioside located primarily in the central nervous system and was found to be a major component of myelin gangliosides.⁴ It was also found to be a specific marker for human myelin and oligodendroglial perikarya. However, in chicken cerebellum, GM₄ is associated with astrocytes, and not with myelin. GM₄ has been found to be the major ganglioside in chicken egg yolk, chicken embryonic liver, and frog liver.
