

PRODUCT DATA SHEET

GLC-10 Mixture (quantitative)

Catalog number: 1095

Storage: -20°C

Concentration: neat

Quantity: 50mg

Solubility: methylene chloride

GC Conditions:

Column: SP2330 or RTX 2330

Carrier Gas: helium

Make-up Gas: helium

Split Ratio: 100:1

Oven: 190°C

Detector: 250°C

Linear Velocity: 20cm/sec

Program Rate: isothermal

Hold Time: N/A

Injector: 250°C

Elution Order	Carbon Number	Component Name	% Conc. by weight
1	C16:0	Methyl hexadecanoate, (palmitate)	20
2	C18:0	Methyl octadecanoate, (stearate)	20
3	C18:1	Methyl octadecenoate (<i>cis</i> -9), (oleate)	20
4	C18:2	Methyl octadecadienoate (all <i>cis</i> -9,12), (linoleate)	20
5	C18:3	Methyl octadecatrienoate (all <i>cis</i> -9,12,15), (linolenate)	20

Application Notes:

This fatty acid mixture contains several long-chain fatty acid methyl esters for the quantitative identification and quantitation of unknowns. All materials are analyzed to verify their identity and to determine their purity. All analytes are 98+% pure. This standard is accurately prepared by gravimetric technique and all glassware is class A rated. Ampules are purged with nitrogen/argon before and after filling and chilled before being flame sealed. Store ampules sealed as received and process without delay immediately after opening the ampule.
