

PRODUCT DATA SHEET

GLC-100 Mixture (quantitative)

Catalog number: 1104
Solvent: methylene chloride
Storage: -20°C
Concentration: 50mg/ml
Volume: 1ml
Source: synthetic and plant

GC Conditions:
Column: SP2330 or RTX2330, 30m x 0.25mm
x 0.20µm
Oven: 205°C isothermal
Carrier: helium @ 20cm/sec.
Detector: FID, 250°C
Injector: 250°C

Elution Order	Carbon Number	Component Name	% Conc. by weight
1	C18:0	Methyl octadecanoate (stearate)	20.0
2	C19:0	Methyl nonadecanoate	20.0
3	C20:0	Methyl eicosenoate (arachidate)	20.0
4	C21:0	Methyl heneicosanoate	20.0
5	C22:0	Methyl docosanoate (behenate)	20.0

Application Notes:

This fatty acid mixture contains long chain saturated fatty acid methyl esters in methylene chloride for the qualitative identification and quantitation of unknowns. Microbial fatty acid profiles are unique from one species to another and can therefore be used in the determination of bacterial identity. All materials are analyzed to verify their identity and to determine their purity. All analytes are 98+% pure. This standard is accurately prepared by gravimetric technique (+/- 0.5%) and all glassware is class A rated. Ampules are purged with nitrogen/argon before and after filling and chilled before being flame sealed. Store ampules sealed as received and process without delay immediately after opening the ampule.
