

PRODUCT DATA SHEET

N-Oleoylethanolamine

Catalog number: 1751

Common Name: NOE

Source: synthetic

Solubility: chloroform, ethanol, methanol, ethyl ether, DMSO

CAS number: 111-58-0

Molecular Formula: C₂₀H₃₉NO₂

Molecular Weight: 326

Storage: -20°C

Purity: TLC >98%, GC >98%; identity confirmed by MS

TLC System: chloroform/methanol (90:10 by vol.)

Appearance: solid

Application Notes:

N-Oleoylethanolamine is a naturally occurring acylethanolamide that has been shown to have many biological functions. N-Oleoylethanolamine has been shown to be an efficacious inhibitor of acid ceramidase as well as an inhibitor of glucosylation of natural ceramides.¹ It is specifically an inhibitor of the acid ceramidase found in human kidney and cerebellum with an IC₅₀ of approximately 500µM. Farber's disease is characterized by a lack of acid ceramidase activity and N-oleoylethanolamine can be used to study aspects of this disease. Whereas the inhibitor D-MAPP potently inhibits alkaline ceramidase (IC₅₀ approximately 5µM) N-oleoylethanolamine shows only slight inhibitory characteristics towards this ceramidase.² N-Oleoylethanolamine is chemically related to the endocannabinoid anandamide, although it is not a cannabinoid itself. It is produced, during feeding, in the small-intestinal enterocytes from oleic acid and phosphatidylethanolamine and acts as a satiety signal (by engaging peroxisome proliferator-activated receptors-α) and alters gastrointestinal motility. The levels of N-oleoylethanolamine are low during food deprivation (which activates a hunger signal) and normalize with food intake (which activates a satiety, but not a satiation, signal through sensory afferent neurons). It has been shown to reduce weight gain in rats and mice and has been suggested as a tool to combat obesity, diabetes, and eating disorders.³ N-Oleoylethanolamine is also released during sleep deprivation and it is thought that it may act as an endogenous neuroprotective signal.⁴ Other functions of N-oleoylethanolamine include altering peripheral lipid metabolism, inhibiting gastric emptying, inhibiting insulin metabolic and mitogenic signaling, enhancing memory consolidation, and altering stress responses.
